A SYSTEM AND PROCESS FOR PRESENTING SEARCH RESULTS IN A HISTOGRAM/CLUSTER FORMAT

ABSTRACT OF THE DISCLOSURE

A user interface system and process for graphically displaying the results of a standard search, such as a database search, to a user on a display device via an interactive search results window in which the user views and filters search results items. These results can be presented in either a cluster or histogram format, or both. This allows the user to visualize the results graphically, rather than just displaying a list of the items found. In addition the presentation of the search results can be graphically manipulated to easily filter the results as desired by the user.
